

ASIAN BUSINESS SOLUTIONS, INC. is an Information Technology company engaged in providing Technology, Software and System Solutions as well as Development, Integration, Project Management and Implementation Services to various industries within the local as well as global markets.

Working in concert with our technology partners, we provide total business solutions to advance our clients' corporate competitiveness and strengthen their overall level of service and customer advocacy. We offer informed choices for building high-performance and efficient workplace through technology software and system infrastructures for today's e-market place.

At ABSi, we specialize in designing, developing and implementing best-of-class information technology, solutions, which can be customized to suite our clients' unique business requirements. We deliver total business solutions, which are based on recognized best practices and backed by our years of successful delivery and implementation.

Asian Business Solutions, Inc., since 1997 has proven its strength and capability to deliver solutions to a number of organizations that currently use our products and services.

Total business solutions

*ABSi creates and delivers
enabling business solutions to
keep you ahead of competition.*

ABSi products and services address diverse areas of commerce, giving our clients the opportunity to adjust and re-invent their business within the changing business landscape. Exciting new delivery channels such as the internet drive us to constantly create business solutions to enable our clients to expand their selling models to new revenue streams.

Our products are engineered on open, scaleable and modular architecture, which can run on Microsoft Operating Environment and most UNIX operating systems, as well as on a variety of hardware platforms.

We provide a range of innovative technology and software products and the associated services to match specific client and market needs. Our clients benefit from our faster time-to-deployment and proven product quality.

Our maintenance agreement also protect our clients' technology investments by providing automatic access to product upgrades, new releases, onsite support and electronic knowledge base.

Product & Service Innovations

*ABSi adds perspective and
insights to your ground-breaking
IT strategies and initiatives.*

As technology progresses, ABSi commits to keeping our clients one step ahead of industry developments in terms of technology, software and system solutions. Our team extensively researches new and emerging technologies and tools, while our business consultants closely examine the expanded business applications of our technology, software and system enablers.

At ABSi, we constantly pursue research and development to further strengthen our knowledge of business, technology, methodology and service issues. This way we are able to offer our clients maximum returns on investment on our business solutions.

On the functional level, we are looking to go beyond online systems to embrace customer loyalty schemes, preference profiling and relationship management, and the B2B deployment of our solutions.

On the technological level, we are looking at smart cards, and browser-based deployments, as well as the JAVA technology platform.

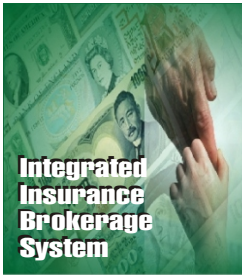

On the level of product design, ABSi will build the future into our software products with security and internet-enabling. An emphasis on modularity and object-oriented programming will seamlessly extend the functionalities of our technology and software products.

On the level of services, ABSi is building its electronic knowledge base for product and project *frequently-asked questions* which our clients and business partners can easily access on the web. Our Customer Relationship Management and User Groups will allow our increasing number of clients to actively participate in industry as well as technology information exchange.

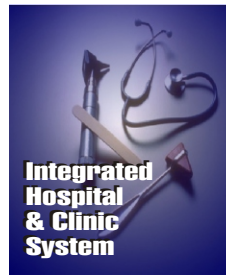

We deliver enduring value to empower your enterprise.

OUR MISSION:

To become a leading and respected total business solutions company that creates and contributes value to our customers, partners, employees, stockholders, and to the community in which we operate.

IIBS: Integrated Insurance Brokerage System is a comprehensive intelligent technology and system solution unparalleled in its class to back insurance and reinsurance brokerage operations. The IIBS combines the ease of use with rich, practical software features powered by Oracle Technology. It is the solution-of-choice of insurance and reinsurance brokers to deliver quick insurance coverage, renewals, collections, remittance, claims processing and online Financial Reports such as Income Statement and Balance Sheet as well as aging reports on Accounts Receivables and Account Payables. Its dynamic electronic trading module, **InsureONLINE**, provides a powerful way to reach your customers and business partners, unleashing the enormous potential of internet-commerce.

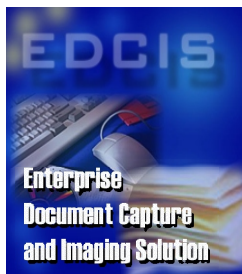

IHCS: The Integrated Hospital and Clinic System is a cost-effective integrated solution addressing the major processes and information requirements of a hospital and/or clinic operation. This software solution offers a full-functionality and complete hospital and clinic system designed and developed using the robust technologies of Microsoft, Sybase / Oracle and Powerbuilder.

EDMS: Enterprise Document Management Solutions. ABSI as the authorized Philippine ValueNET partner of FileNET Corporation (US), markets and supports the market leader and easy-to-use FileNET family of products for electronic document management, document imaging, COLD (computer output to laser disk), and workflow solutions. The FileNET product suite unites the web-based and client-server enterprise content management and workflow technologies to help enterprises maximize productivity and efficiency through simplified and streamlined document and process flows.

ISIS: The Integrated School Information System delivers an information technology solution for effective and efficient school management, providing a broadband infrastructure of resources for students, teachers, and administrators. ISIS delivers a complete suite of user-friendly application system for efficient enrollment, billing and collection processes as well as effective school financial management.

EDCIS: Enterprise Document Capture and Imaging Solution - is an application designed for storage and retrieval of scanned documents. This solution delivers an effective way to manage paper files by allowing you to capture, convert, store and retrieve paper documents as digital images. This technology solution allows you to share online electronic documents and images within a group, scaling up to the whole department. Electronic document and image retrievals can be done in seconds, online and realtime at your fingertips, without the risk of misplacing and losing important documents.

LGU Online Solution: Local Government Unit. In this era of advanced technologies, ABSI offers the LGU Online for fast and efficient processing and monitoring of business permits, real property tax, and civil registry within the Local Government Unit. Developed in Microsoft Visual Basic and ORACLE technologies, and backed by the award-winning FileNet Document Management Solution, the LGU Online harnesses the power of Information Technology for intranet, internet and extranet deployment.
