

Enterprise Document Management SOLUTIONS

In partnership with the *FileNET Corporation (US)*, ABSI markets and supports the *FileNET* family of products which provides sophisticated, yet easy-to-use electronic document management, document-imaging, COLD (computer output laser disk), and workflow solutions.

Committed to deliver best-of class products (from scanners, servers, workstations, storage media to system software), *ABSI* integrates the leading-edge *FileNET* products to help customers maximize productivity and efficiency through simplified and streamlined business processes. To complement our *FileNET* solutions offering, *ABSI* has increasingly focused on building strategic business and technology partnerships with partners like *Hewlett-Packard (HP)*, *IBM*, *Sun*, *Microsoft*, and *Oracle*.

The FileNET Product Suite

PANAGON CAPTURE DESKTOP

Panagon Capture Desktop for Content Services acquires and processes digital and paper-based documents into the Content Services Repository, providing an easy-to-use front end for eContent management. Suitable for departmental, ad hoc and low to medium-volume scanning environments. It captures, indexes, and stores virtually any document type, so that your departments and workgroups can efficiently capture information needed in their daily operations. Panagon Capture Desktop is an entry-level offering within FileNET's Panagon series of document capture solutions.

VISUAL WORKFLOW

The new millennium will bring ever-increasing pressures on organizations to continue to streamline their business operations. In fact, the automation of business processes, particularly as they relate to business-to-business eCommerce, via the Web will become increasingly important to the enterprise. Workflo represents the enabling technology that facilitates this business process automation.

FileNET's Panagon Visual Workflo is a proven, world-class process improvement solution for your mission-critical, high-volume business processes. This versatile Web-enabled product offers you an innovative means to ensure that your organization's tactical and strategic requirements for eBusiness procedures and eProcess management can be met.

WEB SERVICES

Panagon Web Services provides you with immediate access to your documents through a standard Internet browser. The core product and development platform for Panagon eContent and eProcess management, with Panagon Web Services you can electronically view, manage, share, revise and distribute virtually all document types - including fax, word processing, spreadsheets and scanned paper documents, HTML forms, computer-generated reports, electronic data interchange (EDI) information, and even audio and video clips.

Panagon Web Services supports both complex and compound documents, and multi-level security features, provide controlled access to any repository information. User name and password encryption is also supported.

Panagon Web Services uses your own Web browser, with document access through standard HTML Web pages that can be customized for your application.

PANAGON REPORT MANAGER

The *Panagon Report Manager* software is an innovative COLD (Computer Output to Laser Disk) software product that helps your organization improve customer service by significantly reducing the cost, effort, and inefficiency involved in producing, storing, and accessing paper documents and microfiche. It virtually eliminates the printing and distributing of computer-generated reports and statements.

PANAGON INTEGRATED DOCUMENT MANAGEMENT (IDM)

The *Panagon Integrated Document Management (IDM) Software* integrates disparate document types in a software solution with a single user interface that makes corporate information accessible anywhere. It is a comprehensive solution to managing all documents for both enterprise and line-of-business applications that unleashes the power of information throughout the organization.

Companies today need to go beyond the concept of an on-line filing cabinet to streamline services and cut costs. *IDM* addresses the issues from the user's and application developer's viewpoints with systems that can be customized more efficiently. These systems require less maintenance and are intuitive, putting information into the hands of those who need it, in a format that they can use immediately.

A key element of the *IDM* solution is the ability to query enterprise documents in real time within your department or across continents. This "out-of-the-box" integration allows you to seamlessly view and work with more than 200 data types without the native application present, eliminating training time and costs on proprietary software. And, the same *IDM* applications can be developed in Web and client/server environments, saving deployment resources and allowing universal access of information from any desktop.
